Metalmart's dog yards are manufactured to the highest standards using 25nb (33.4 outside diameter) galvanised pipe and 50 x 50 x 3.15 galvanised mesh. All welds are cleaned with a wire brush and painted to prevent rust. The Metalmart dog yard system can be set up in a range of configurations to suit your specific requirements. Whether against an existing wall or in a paddock the yards work extremely well.

Using award winning Elgate fittings the Metalmart dog yards can be assembled in a matter of minutes to form a strong, durable and safe holding area for your dog. Hinges and joining clamps are two piece with 10mm nuts and bolts. The simplicity of these fittings ensures the panels are erected to form a functional dog yard in a matter of minutes.

With final dimensions of 2.2 metres wide and 1.9 metres high Metalmart's dog yards will keep your dog safe and secure.

A final clearance of 50mm between ground level and bottom rail the Metalmart's dog yards can easily be kept clean by hosing out or sweeping under the bottom rail.
